

DQFashion Sales Performance Analysis 2017

Bootcamp Data Analyst with Excel – Final Project

Alya Nabila Nindarini

Business Understanding

DQFashion aims to understand the factors influencing revenue performance throughout 2017 to support more effective business decision-making. The company seeks to identify sales patterns throughout the year, evaluate the impact of holidays on revenue, assess the contribution of each branch, and determine which product categories and products are the primary drivers of company revenue.

Through this analysis, DQFashion can identify peak sales periods, evaluate branch contributions, understand which categories and products contribute the most to revenue, and uncover opportunities to improve the performance of categories with relatively low revenue contribution.

Data Preparation

The screenshot shows the Power Query Editor interface. The 'Query Settings' pane on the right lists the 'APPLIED STEPS' for the 'Transaksi_Penjualan' query:

- Source
- Navigation
- Imported Excel Workbook
- Transaksi Penjualan_Sheet
- Promoted Headers
- Changed Type
- Inserted Text Before Delimiter
- Inserted Text Before Delimiter1
- Renamed Columns

The main data view shows a table with the following columns: No, Kode Transaksi, Urutan, Kode Produk, Jumlah Pembelian, and Kode Cabang. The data rows show transactions from 01/01/2017.

The **ETL (Extract, Transform, Load) process** is performed using **Power Query** to prepare the data for analysis.

Power Pivot is used to build a **data model** using a **star schema** approach that links the sales transaction table with the product, category, branch, and holiday master tables.

The data was then analyzed using a **Pivot Table** and visualized in the form of an interactive dashboard.

Performance Overview

January – December 2017

DQFashion generated **Rp59.96 billion** in revenue from **236.75 thousand** units sold across **396 transactions** in 2017. The average revenue per transaction reached **Rp151.42 million**.

Revenue Trend Analysis

Revenue reached its peak in **June (Rp7.94 billion)**, nearly double the revenue recorded in **February (Rp4.08 billion)**, indicating a significant seasonal increase during the mid-year period.

Revenue	Month												Sparkline Line	Sparkline Column
Branch	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec		
Cabang Jakarta	1.15B	1.13B	1.23B	1.22B	1.23B	1.96B	1.23B	1.24B	1.18B	1.22B	1.18B	1.22B		
Cabang Makassar	1.24B	1.13B	1.22B	1.15B	1.21B	1.98B	1.20B	1.28B	1.16B	1.12B	1.15B	1.18B		
Cabang Medan	1.17B	1.09B	1.24B	1.16B	1.23B	2.03B	1.20B	1.24B	1.17B	1.26B	1.23B	1.19B		
Cabang Surabaya	1.16B	0.73B	1.08B	1.17B	1.19B	1.97B	1.24B	1.17B	1.18B	1.22B	1.16B	1.26B		

Revenue trends were generally consistent across all branches, with revenue peaking in **June** and declining in **February** for most locations. This suggests that revenue fluctuations were driven by **company-wide or seasonal factors** rather than branch-specific conditions.

Holiday Impact on Revenue Performance

(Identifying the factors behind June's revenue peak)

Daily analysis shows that revenue began to increase between June **14 and 25, 2017**. Since **Eid al-Fitr 1438 H** fell on **June 25, 2017**, this surge in revenue was likely driven by increased shopping activity leading up to the holiday.

Top 10 Holidays by Revenue

Hari Raya Idul Fitri 1438 Hijriah	618.47M
Cuti bersama Idul Fitri 1438 Hijriyah	611.72M
Hari Lahir Pancasila	172.18M
Hari Raya Waisak 2561	165.76M
Kenaikan Yesus Kristus	162.77M

This analysis is supported by holiday-based revenue data, which shows that **Eid al-Fitr** and **the Eid al-Fitr public holiday period** accounted for the **highest revenue contributions** of the year. Conversely, the lower revenue in February and October may be attributed to the absence of major holidays or seasonal factors that typically stimulate consumer spending.

Branch Performance Analysis

Each branch contributed between **24% and 26%** of total company revenue, indicating a **relatively balanced revenue distribution across branch locations**.

Revenue patterns by category are consistent across all branches, with **Dresses** and **Tops** contributing the largest share of revenue, while **Accessories** contribute the least. This indicates that **customer purchasing preferences are relatively similar across branch locations**.

Category Performance Analysis

Revenue by Category

Dresses and **Tops** are the company's largest revenue contributors, accounting for **33%** and **26%** of total revenue, respectively, while **Accessories** account for only **9%**. The consistent category ranking throughout the year suggests relatively stable demand across product categories.

Despite recording the **lowest sales volume**, **Dresses** generate the **highest revenue** among all categories. This indicates that higher sales volume does not necessarily translate into higher revenue.

Unit Sold by Category

Product performance Analysis

(Identifying products that drive revenue and sales volume)

Top 5 Products by Revenue

The company's revenue is driven by several top-performing products, with Jackets, Maxi Dresses, and Dresses generating the highest revenue. Although Jackets generate the highest revenue among individual products, the **Dresses category remains the largest revenue contributor overall**. This suggests **that the category's strong performance is supported by several high-performing products**.

Top 5 Fast Moving Products

Within the Tops category, Sweaters record the highest sales volume, while Jackets generate the highest revenue. This shows that **higher sales volume does not always translate into higher revenue**, even among products within the same category.

Key Insights

- Revenue peaked in **June (IDR 7.94 billion)** and reached its lowest point in **February (IDR 4.08 billion)**.
- **Eid al-Fitr** and the **Eid al-Fitr public holiday period** generated the highest revenue contributions of the year.
- Revenue distribution across branches was relatively balanced (**24%–26%**), indicating that performance was not dependent on a single branch.
- **Dresses** were the largest revenue contributor (**33%**), while **Accessories** contributed the least (**9%**). Category rankings remained consistent throughout the year.
- Despite having the lowest sales volume, **Dresses** generated the highest revenue among all categories.
- **Jackets** generated the **highest revenue** among individual products, while **Sweaters** recorded the **highest sales volume**, showing that higher sales volume does not always translate into higher revenue.

Recommendations

- **Optimize promotions and inventory planning ahead of Eid al-Fitr**, as this period generates the highest revenue contribution and presents the greatest sales opportunity.
- **Prioritize Dresses and Tops in marketing and inventory strategies**, as these categories contribute nearly **60% of total revenue** and play a key role in overall business performance.
- **Conduct further analysis on the Dresses category** to understand why it generates the highest revenue despite having the lowest sales volume, and use the findings to support category and pricing strategies.
- **Explore growth opportunities for the Accessories category**, which contributes only **9% of total revenue**, through promotions, bundling, or product expansion initiatives.
- **Monitor branch performance regularly** to maintain the balanced revenue distribution across locations (**24%–26%**) and identify potential performance gaps early.

Thanks!
